OEM CERTIFIED REMANUFACTURING

FOR ALLEN BRADLEY PRODUCTS

**Rockwell
Automation**

WHAT IS REMANUFACTURING?

Remanufacturing is a process performed by an original equipment manufacturer to return a **used** piece of equipment to “**like new**” condition, including **firmware updates** that enhance cybersecurity and safety.

BEYOND REPAIRS

- **Proactive Component Replacement:** We REPLACE not only failed parts, but COMPONENTS nearing end-of-life, based on age and condition.
- **Comprehensive Functional Testing:** Every unit undergoes full functional and load-testing to ensure like-new performance and compliance.
- **Traceability and Asset History:** All replaced components are logged and detailed repair reports are provided with every remanufactured unit to give you clear insight into cause and actions taken.
- **Up-to-Date Specifications:** Assets are updated to the latest approved specifications and SECURE FIRMWARE. This ensures that every remanufactured unit meets current compliance and security standards defined by Rockwell Automation.
- **Comprehensive Warranty:** Every billable remanufactured asset receives a comprehensive warranty covering the ENTIRE UNIT, not just replaced components.

This approach maximizes asset reliability, simplifies future service, and provides peace-of-mind with OEM-backed quality and documentation.

REMANUFACTURING SERVICE LEVELS

ECONOMY REMANUFACTURING

Competitive Differentiators

- Revision updates
- OEM specified components
- OEM functional testing
- New product warranty tracking and recovery

Service Level

- Customer/distributor incurs shipping costs to ship to the remanufacturing center
- 12-month warranty on the entire unit

Best option for customers with:

- High-quality repair expectations
- Extensive MRO spare inventory
- Tolerance for remanufacturing turnaround

REMANUFACTURED PRIORITY EXCHANGE

Competitive Differentiators

- Revision updates
- OEM specified components
- OEM functional testing
- New product warranty tracking and recovery

Service Level

- Ships out within 24 hours
- Free return shipping for failed units
- 24-month warranty on the entire unit

Best option for customers with:

- High-quality repair expectations
- Significant downtime costs
- Machine down situation

Quality remanufacturing minimizes security risks, improves production uptime and lessens downtime risk.

Enable the circular economy with sustainable repairs that prolong the life of your assets.

Decrease MRO spend compared to buying new; options for repair agreements can simplify budgeting.

12 Month warranty

Every remanufactured part receives a minimum 12-month* comprehensive warranty on the entire unit.

*Up to 24-month warranty, depending on the service and region.

REMANUFACTURING DELIVERS THE SAME QUALITY EXPECTATION AS WHEN THE EQUIPMENT WAS PURCHASED NEW

REMANUFACTURING PROCESS

RECEIVE & VERIFY

- Catalog number, series and revisions identified
- Check for any applicable warranty coverage
- Review product configuration and history

BREAKDOWN & CLEANING

- Part disassembled and cleaned
- Point of failure(s) identified and repaired

REVISIONS & ENHANCEMENTS

- Firmware and hardware updates made
- Only available from Rockwell Automation as the original equipment manufacturer (OEM)

PROACTIVE VERIFICATION

- Individual components/sub-assemblies inspected and tested
- Inoperative components replaced
- Proactively replace marginal or aged components where needed

FUNCTIONAL, LOAD, & ENVIRONMENTAL TESTING

- Proprietary OEM testing
- Confirm that product performs to specifications
- Temperature testing
- Shock/Vibration testing
- Humidity testing

FINAL PREP & RETURN

- Clean and visually inspect unit
- Label with revision information
- Include accessories such as keys, batteries, and instruction manual
- Repair report
- Custom-engineered, anti-static bags and containers
- Secure shipping
